

What is a Pre-Employment Aptitude Test?

An aptitude test by definition is any number of various tests given to measure abilities, such as manual dexterity, visual acuity, reasoning, or verbal comprehension, and used to assist in the selection of a career. By definition it is also assumed that a pass/fail rating is determined for such tests.

How are Assessments from TTI Performance Systems Different?

Overall TTI assessments are not pass/fail assessments. **While on the surface some of the assessments appear to have ten as the best “score” this is not the case.** Each factor of measurement can be a strength on either end of the scale (a zero all the way to a ten). This is because of our job-related process. TTI does not recommend using assessments in hiring unless you have completed our job benchmarking process.

The job benchmarking process is designed to provide clarity as to the position requirements, key accountabilities, skills,

behaviors and motivators for each position within an organization. While TTI has over 7000 job benchmarks available, it is recommended to complete the process within each organization for each position.

Because the TTI assessments are not pass/fail, the “80 percent” rule has to be applied differently. In order to illustrate TTI’s compliance with this standard, we look at the mean of the measured factors for the general population as well as male/female, veteran status, disability status and ethnicity. The following charts will demonstrate that the TTI assessments do not have more than a 20 percent difference in how protected groups score versus the general population.

Adverse Impact Study Completed in 2012

Conclusion—There is no evidence to suggest any of the TTI assessments (DISC, Values, HVP) could cause adverse impact with regard to gender, race, disability or veteran status.

Even though the means of the subgroups are statistically different from the means of the general population, they are all well within the EEOC guideline of 80 percent and well within the first standard deviation from the population mean.

Behavioral/DISC Findings as of February 2012

Random Sample N=17,801

Measurement	Mean	Standard Deviation
Dominance	45.56	16.39
Influence	60.92	15.37
Steadiness	54.74	17.03
Compliance	46.81	15.08
